

Oncology Care Model Practice Requirements

1. Provide patients 24/7 access to a clinician with access to their records.

24/7 access to oncology nurses and patient navigators, to seamlessly supplement staffing resources. Includes full documentations and transparency back to the clinic.

2. Provide the core functions of patient navigation to all patients.

Complete patient-centered care management solution, including pre-appointment collection of medical history and navigation needs, symptom triage, adherence tracking, distress assessments, ongoing patient navigation support and care and survivorship planning.

3. Use an ONC-Certified EHR and attest to Meaningful Use.

The Navigating Care Patient Portal solves the patient-interaction objectives for Meaningful Use and is ONC-Certified as a modular EHR for the 2011 and 2014 Editions.

4. Create a care plan and actively engage patients in this process.

A user-friendly solution for your care team to document, share, and interact with patients regarding their comprehensive plan of care. The Navigating Care Survivorship template meets the Commission on Cancer's standards for Survivorship care plans.

5. Use data for continuous quality improvement.

Efficiently manage patient interactions and collect critical data for reporting including patient navigation and patient interactions.

6. Treat patients with therapies consistent with nationally recognized clinical guidelines.

Clinically-proven, next-generation triage pathways solution to minimize variability and maximize consistency of effective symptom management.
